Art Unit: 2627

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Tanaka et al (4389681).

The claims are merely drawn to a data bit "control bit" specifying an action in a data medium. The claims read on a header data having address bits specifying a servo action. The claim also read on a sync data having sync bits specifying a synchronization signal. Basically the claims read on an inherent feature of an optical disk having generic control bits for an action needed during the disk operation. The reference shows a medium having data blocks divided into sectors having ECC blocks, each of the data sectors having control bits C having a specific sampling rate "action" during the reading of data meeting the broad interpretation of the claimed invention as cited in column 9 line 35 to column 10 line 55.

With respect to the limitations of claims 2, 4 and 6. The claim is drawn to a medium having sectors within a track having ECC as shown in fig 2B.
